SN 4

smart energy management

Capative voltage detecting system

User manual

Document version: 01i02
Update: 2019-12-19

50 60 Hz

Safety information

When the device is in operation some of its parts may be connected to a hazardous live voltage.

Improper operation of the device or its application to purposes different from the intended use may pose hazards to operators and /or may lead to the equipment damage.

National and local electrical safety regulations must always be followed.

The user shall be held fully responsible for any safety risk and possible failures of the equipment that may arise due to such an improper operation or misuse.

Exploration of damaged device can result in malfunction of protected object and result in threat to life and health.

Reliable and defect-free operation of the device needs appropriate transportation, handling, storage, installation and commissioning as well as correct operation and maintenance.

The device can be installed and operated solely by accordingly trained personnel.

Attention

We reserve the right to modify the device.

Device is an industrial monitoring and control instrument.

Remaining user documentation can be downloaded from energetyka.itr.org.pl

Contents:

1. Introduction

1.1. Symbols

Electrical warning symbol indicates the presence of hazardous energy circuits or electric shock hazards.

The warning symbol indicates the important information related to the threat to life and health.

The information symbol indicates the clarification of relevant features and parameters of the device.

2. General Information

2.1. Destination of the equipment

Device SN 4 is designed for a continuous voltage signalization on in MV grids.

Fig. 2.1.1 The view of SN 4

SN 4 is provided with two relay outputs and two LED diodes signaling the lack of voltage in MV grids. This allows to construct local blocking and sound device signaling voltage restoration.

The voltage presence is indicated separately for every monitored phase as a displayed symbol . The device is made to the requirements of the **LRM** system - standard **IEC/PN-EN 61243-5**. Connection with current buses over reactance insulators.

SN 4 is provided with a protection flap to block direct access to the front panel. During normal operation the protection flap should be closed. It shall be opened only for measurements; with measurements complete close the flap again.

2.2. Features

Case

- small dimensions 125.5 / 55,7 / 50 mm
- flush-mounted

User interface

- 3 signaling diodes: **ON** - red diode, voltage presence, **OFF** - orange diode, no voltage, - supply
- 3 symbols signaling voltage presence on each monitored phase

Signalization

Two relay outputs (contact, switch-over):

- voltage at one of monitored phases
- no voltage at monitored phases

Voltage presence at each of monitored phases - a lighted signal signal on the LCD display:

- voltage present at each monitored phase - signaled by lighted red diode **ON**
- no voltage on monitored lines as lighted orange diode **OFF**

2.3. Front panel

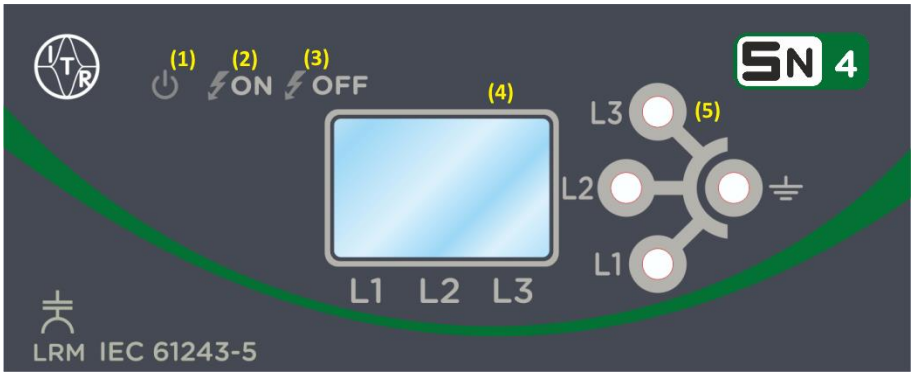

Fig. 2.3.1. Front panel view

On the front panel there are:

1) Diode signaling the supply voltage
2) Diode signaling the voltage presence
3) Diode signaling no voltage present
4) LCD display
5) LRM connector

2.4. Optical signaling

Tab. 2.4.1. Meaning of predefined diodes:

Symbol/Name	Color	Description
	green	signals feeding of correct supply voltage to the device continuous light
ON	red	signaling voltage presence on one line
OFF	orange	signaling no voltage present
	black	signaling voltage presence on a given line

In case in a space where the device is operating there is a strong solar radiation in order to read the signaling bet it can be necessary to manually dim the LCD display better.

3. Operation manual

SN 4 is designed for continuous voltage signalization in MV grids. It checks three phase voltages and signals the presence of each of them. It is provided with two binary voltage less outputs (contact, switch-over).
The binary output DO_1 serves for signaling the lack of voltage on monitored lines.
The binary output DO_1 serves for signaling the presence of voltage on monitored lines.
On the front plate there are three diodes signaling operation of the device, no voltage on monitored lines, orange diode **OFF** and voltage on at least one of monitored lines, red diode **ON**. On the LCD display a lighted symbol means no voltage or voltage presence on each monitored phase (this signal needs not supply).

Signaling presence or lack of voltage at binary outputs and LED diodes requires voltage supply connected to the device.

Tab. 3.1. Operation signaling:

LCD signaling			LED signaling		Binary output		Phase voltage		
L1	L2	L3	lack of voltage (OFF diode)	voltage presence (ON diod)	lack of voltage DO_1	voltage presence DO_2	L1	L2	L3
					•

4. List of referred standards

The device described in this manual has been designed and is manufactured for industrial applications.

The engineering and manufacturing processes assumes compliance with relevant standards. Adherence to these standards during installation, commissioning and operation of the device by the user is the essential precondition to achieve the desired performance and safety levels.

The device meets essential requirements specified in the applicable EU Directives:

- Electromagnetic compatibility (EMC) 2004/108 / EC
- Low-voltage electrical equipment (LVD) 2006/95 / EC

Tab. 4.1. Harmonized standards

No. standards	Title of the standard
PN-EN 61000-6-2:2008	Electromagnetic compatibility (EMC).
PN-EN 61010-1:2011	Safety requirements for electrical equipment for measurement, control, and laboratory use. General requirements
PN-EN 61243-5:2004	Live working. Voltage detectors. Voltage detecting systems (VDS)
PN-EN 60529:2003	Specification for degrees of protection provided by enclosures (IP code).

5. Technical parameters

5.1. Input/outputs circuits

Voltage input circuits	
Number of inputs	3
Minimal voltage threshold, LCD signaling	3.4 V rms +-0.2V
Minimal voltage threshold, LED, relay signaling	3.4 V rms +-0.2V
Voltage hysteresis of the LED signaling	0.05 V rms
Input capacity	1500 pF + matching capacitor
Maximum length of the connected cables	< 3m
Binary outputs	2
Switching capability at resistance load	250 V AC, 5 A 30 V DC, 5 A 250V DC, 0.1 A 1250 VA
Contacts material	AgNi
Maximum length of the connected cables	< 3m

5.2. Power supply

Nominal voltage	⎓ 24 V -20% +10%
Power consumption	< 1 W
Resistance to voltage dump	10 ms

5.3. Environmental conditions

Temperature operational	-25˚C … +55˚C
Temperature storage	-35˚C … +85˚C
Air humidity	lack of condensation and frost deposition
Class equipment	0
Overvoltage category	III
Electrical environment	B
Pollution degree	2
Mechanical tests	
Sinusoidal vibration	class 1
Single and multiple shocks and bumps	class 1
Seismic	class 0
Installation	indoor

5.4. Construction

Mass	< 0,5 kg
Dimensions (width, height, depth)	125.5 / 55,7 / 50 mm
Degree of protection	
Front panel side	IP 54
Connector side with connectors plugged	IP 30
Connector	
Type	Wago 254-454 Wago 734-138
	not exposed to corrosion
Connection wires	Cable stranded 0,5...2mm^2 (end sleeve) Cable solid 0,5...2.5mm^2
Stripping length	10 .. 12mm
Housing	
mounting	flush-mounted

5.5. Fuse

Mounted internal fuse	FRN01WK0100A10
	Select these according to general rules so that operation at exceeded rated levels at individual paths is not possible.

6. Connector description

Tab. 6.1. Connector X1

Terminal No.	Designation	Description / Purpose
1	L1	phase L1
2	L2	phase L2
3	L3	phase L3
4	PE	common for L1,L2,L3 (Earth PE)

Tab. 6.2. Connector X2

Terminal No.	Designation	Description / Purpose
1	DC/DC	Power supply 24 VDC (plus)
2		Power supply 24 VDC (minus)
3	DO_1	Output 1 - lack of voltage -normally closed contact
4		Output 1 - lack of voltage -normally opened contact
5		Output 1
6	DO_2	Output 2 - presence of voltage -normally closed contact
7		Output 2 - presence of voltage -normally opened contact
8		Output 2

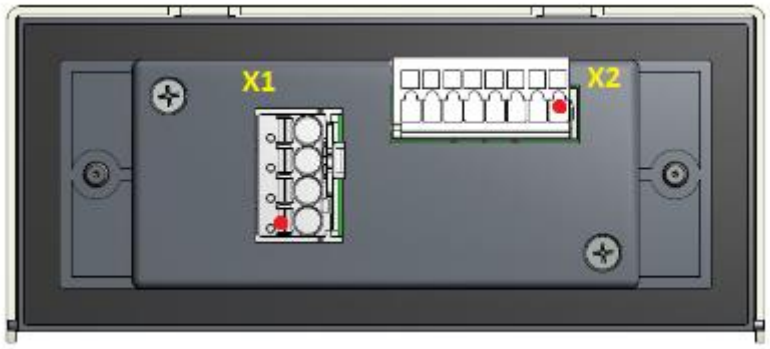

Fig. 6.1. The view of connectors site.

The red dot on the connector is the first pin of the terminal.

7. Application schematic

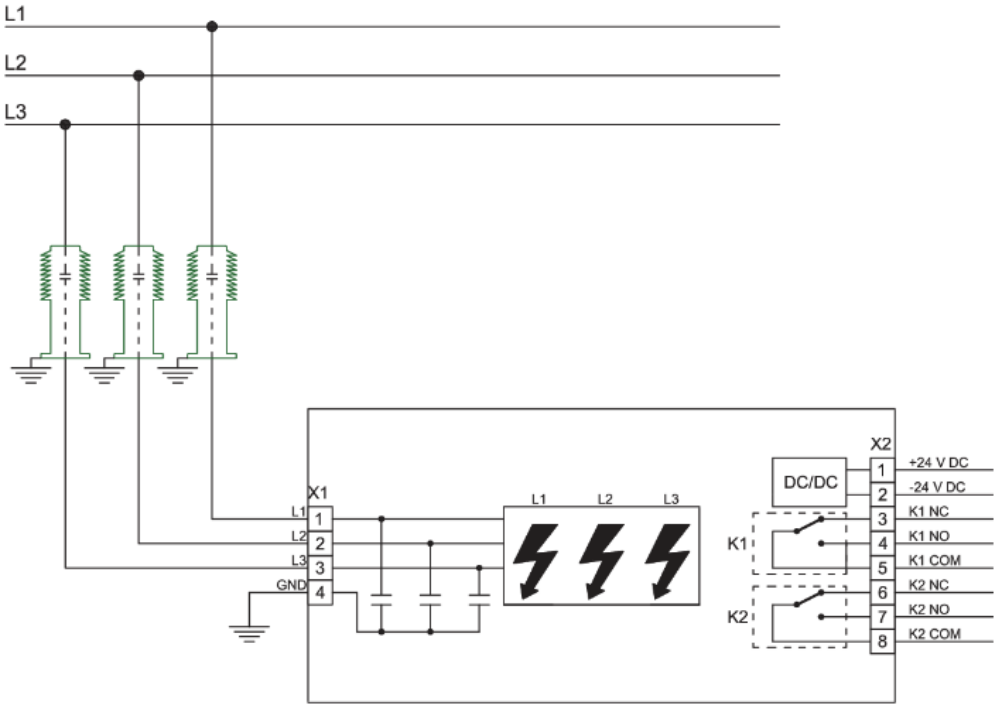

Fig. 7.1. Connection diagram

8. Dimensions

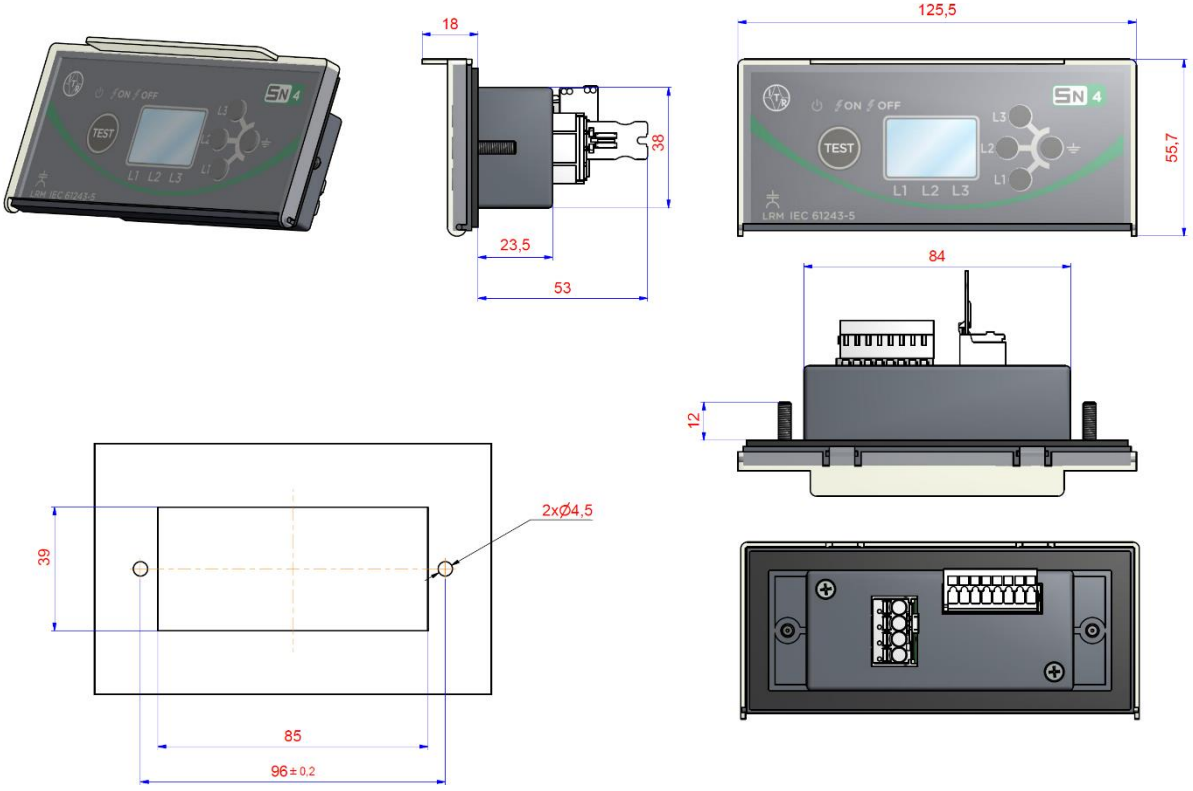

Fig. 8.1. Dimensions

9. Remarks of manufacturer

9.1. Maintenance, inspections, repairs

The manufacturer recommends that correctness of device operation is verified:

a) each time - during commissioning,
b) at least once a year - in mine face installations,
c) at least once every 5 years in installations other than front face.

Also inspections resulting from branch regulations should be undertaken.

9.2. Storage and transport

Devices are packed in transport packages and secured against damage during transport and storage. Devices should be stored in transport packages, indoors, in places free from vibrations and direct effects of weather conditions, dry, well ventilated, free from harmful vapors and gases. Ambient air temperature should be between –35°C and +85°C, and relative humidity should not exceed 80%. All shipped devices are attached with complete set of connectors, grounding braid, warranty card and quality certificate.

9.3. Place of installation

SN 4 device is designed to installation in the mounting hole with dimensions of 85 mm x 35 mm at the door of the indoor power distribution stations. Length of single cable connected to device sockets cannot 3 m.
Installation of the device:

- insertion the device into the mounting hole
- tighten the set screws to the surface of the door

9.4. Disposal

Devices are made mostly from recyclable materials, or materials that can be processed again or disposed of in environmentally sound manner. Decommissioned devices can be collected for recycling, provided that their condition is that of normal wear and tear. All components that are not recyclable shall be disposed of in environmentally sound manner.

9.5. Warranty and service

Regular 36-month guarantee period. Had the sale been preceded by execution of an Agreement between the Buyer and the Seller, provisions of such Agreement shall apply. Guarantee covers remedying of defects, free of charge, provided that instructions specified in the Warranty Card are adhered to. Detailed guarantee conditions may be found at energetyka.itr.org.pl in the w „Sale Regulations".

- The guarantee period is counted from the date of sale.
- The warranty is extended by a period of residence of the product in the repair.
- Unauthorized tampering with the product will void the warranty.

Warranty does not cover damage resulting from improper use of the product.

10. Order specification

SN4	**A** matching capacitor: 0 = lack 1 = 47 nF 2 = 100 nF 3 = 150 nF 4 = 4.7 nF 5 = 10 nF 6 = 22 nF

Order example:

- SN4: A1 - matching capacitor 47 nF
- SN4: A2 - matching capacitor 100 nF

In the case of the order specifications higher than A0 device on the lines L1, L2, and L3 is additionally installed Gas Discharge Tube. At the customer's request can be not installed.

Other versions after consultation with the manufacturer.
